Summary

As a seasoned software engineer with a passion for blockchain and cryptocurrency, I bring a unique blend of technical skills and creativity to the table.

With expertise in Solidity, Rust, and design architecture, I specialize in developing innovative solutions for the emerging DeFi, NFT, and GameFi spaces.

With extensive experience in agile environments and remote cultures, I am well-equipped to adapt to the ever-changing demands of the industry.

If you're looking for a hardworking team player with superior skills in blockchain technologies and a proven track record of success, I would be excited to discuss how I can contribute to your team's success.

Experience

Senior Solidity Engineer

Napier Finance - <https://napier.finance>

Jun 2023 - Oct 2024 (1 year 5 months)

- Take part in designing and developing a modular yield-tokenization protocol.
- Build the yield generation flow interacting with Curve Finance.
- Build a governance system enabled by NPR token.
- Build the testnet version of UI.

Lead Blockchain Engineer

BLUEBERRY FINANCE SOLUTIONS LTD - <https://blueberry.garden>

Jan 2023 - May 2023 (5 months)

- Develop a leverage yield-farming protocol.

- Implement the interaction with yield-generation protocols like curve finance, convex finance and aura finance.
- Build the positions' liquidation service.

Rust & Solidity Engineer

Magic Eden - <https://magiceden.io>

Feb 2022 - Dec 2022 (11 months)

- Work for building NFT launchpad on Solana network.
- Build an launchpad expansion to ETH network.
- Build the SDK for interaction between Ethereum version launchpad and NFT teams
- Work in high-level agile environment

Skills: Rust, Solidity, Ethereum, Solana, SDK Development

Lead Developer

Pickle Finance - <https://www.pickle.finance/>

Jan 2021 - Nov 2021 (11 months)

- Build the yield aggregator on top of yearn ecosystem (ethereum, bsc, polygon and okex).
- Analyze the market and develop the strategy for the company.
- Develop the pickle web3 frontend using Next.js.
- Manage the developers and scrum meeting.
- Deployed pickle token contract on polygon using PoS bridge.
- Implemented the farming strategy for Cometh swap.
- Implemented leverage farming strategy for Aave.
- Implemented Curve strategy for am3crv pool.
- Added the yearn yield source contract for pooltogether integration

Lead Ecosystem Engineer

Harmony One - <https://harmony.one>

Dec 2019 - Aug 2021 (1 year 9 months)

- Work with 25-30 people to build a fast, secure, scalable and sharded layer1 blockchain.
- Lead the wallet ecosystem team of Harmony ONE.
- Build the defi ecosystem on the harmony chain.

- Develop the Harmony ONE Chrome extension wallet with Vue.js (100000+ users are using).
- Develop the multisig wallet on the harmony chain.
- Develop the davinci nft marketplace on the harmony chain.

Senior Solidity Engineer

InnovationUpstream

Sep 2017 - Jan 2019 (1 year 5 months)

- Develop the yield-aggregator in several EVM chains.
- Build a cross-chain functionality to yield-aggregator.
- Develop new defi strategies including vault, stablecoin and AMM.

Web Developer

SV Technology

Feb 2015 - Aug 2017 (2 years 7 months)

Skills: Ruby on Rails · Node.js · React.js

Education

Singapore University of Technology and Design (SUTD)

Bachelor's degree, Computer Science

2010 - 2014

Skills

Solidity · Rust · C++ · JavaScript · TypeScript · Ruby · CosmWasm · Web Development · Web3 · Project Management
